1. Introduction

2. TODO

- Query always set as "snapshot"?
- Describe NullFilter and NotNullFilter behaviours
- Document identifier resolution:—Property with path/name "*id*": *valid if type in (ObjectId,String,BigInteger,byte[])*—*_Identifier* property: valid if only one and type in (ObjectId,String,BigInteger,byte[])
- Document identifier encoding/decoding:—When the document identifier property is named differently from "_id", the documents will provide a field with the path name (example "code") AND a "_id" field with the same value treated as ObjectId
